

Scenario:

You are a newly admitted college student who is struggling with waking up on time and time management. Deciding that enough is enough, you decide to do something about it by downloading our app.

Task 1: Setup the app to make it so you wake up from 9-9:30 everyday.

Task 2: Create new reminders and goals that would benefit your college experience.

Task 3: Use the help function to submit a question for our team to answer.

Notes:

What should we change about our app?

1. Add a function where we can select what time to wake up on certain days.
2. Add a help button on the front screen that makes Help more accessible.
3. Make the goals easier to track by having something that can help keep track of your goal.

What should we keep about our app?

1. The slick design
2. Both the reminder and goal function was seen as a good idea.
3. The statistics to help track your waking up goal was also seen as a help.
